PROFILE

Product designer who codes. Owns the full surface end-to-end, from UX to shipped code. Brings AI-product taste: catches where AI output feels off, in copy and interface, and ships the fix. Most recent: 9 months at JustGrow, an AI parenting companion app bootstrapped to 200+ users and ~50 MAU with no paid marketing. UC Berkeley CS + Cognitive Science, University of Maryland HCIM.

EDUCATION

University of Maryland, College Park — **College Park, MD**
M.S in Human-Computer Interaction (GPA: 4.0/4.0) — *August 2021 – May 2023*

University of California, Berkeley — **Berkeley, CA**
B.A in Computer Science & B.A. in Cognitive Science — *August 2016 – December 2020*

EXPERIENCE

Founding Product Engineer (JustGrow) — **Remote**
LightSail Technologies, Inc. — *August 2025 – May 2026*

- Sole designer-engineer on a small team; own the Flutter client and design system end-to-end, shape AI agent output through prompt design. Product **bootstrapped to 200+ users, ~50 MAU**.
- Identified and corrected multiple **AI-generated UI patterns that look correct but failed in real use**: custom share sheets duplicating native UI, sub-spec touch targets, screen-stack bugs that broke back navigation, missing empty-state copy, etc.
- Designed and built the **achievement system end-to-end** to drive delight moments and user retention; pivoted from leaderboards to personal, non-positional categories after the pilot exposed the wrong co-parent dynamic.
- **Wired design intent into the code base** (constraints log, intentional-exception callouts, design-system guardrail script) so future teammates and AI agents don't "fix" deliberate decisions.
- Built a personalized AI bedtime-story system in English and Chinese; **9.4s end-to-end latency, down from 14s.** Fine-tuning prompts around concrete examples to avoid AI "slops".

Independent Product Designer & Developer — **Remote**
Orvia (Built for a multi-location retailer) — *March – July 2025*

- Designed and shipped (with Cursor) a **shift-management web application** for a multi-location retail operator; **~180 shifts auto-assigned per week**, saving operator 3 hours/week.
- Built the **auto-scheduling engine** in Typescripts; assign shifts against availability, role coverage, and recurring patterns; operators can override any slot without breaking the rule set.

Founding Product Designer — **Remote**
yuse.ai (Closed pre-launch) — *April 2023 – June 2024*

- **Founding designer** for a consumer LLM web application (pre-Gemini era); wrapped GPT, DALL·E, Stable Diffusion, etc. behind a single chat interface for users new to AIGC.
- Set the **0→1 product bet** on LLM approachability when no UX patterns had standardized, designed prompt suggestions and a hand-held onboarding flow that assumed no prior knowledge.
- Designed **six interconnected flows** as a full consumer surface, covering key product components: chat, error handling, onboarding, settings, auth, password reset.

Product Designer — **College Park, MD**
Library of Congress (Capstone project) — *September 2022 – May 2023*

- **Redesigned search and landing pages** across three Library of Congress sites (loc.gov, LoC Catalog, LoC Stack): search routes by user intent; landing pages surface what each site contains.
- Diagnosed the **core IA failure**: users searched loc.gov expecting books and records but got events; "catalog" as jargon unfamiliar; the three sites indistinguishable to general users.
- Validated through **20 usability sessions and 5 expert reviews**; participants who failed the task on the original surface completed it on the redesign.

SKILLS

Design & Research: Figma, 0→1 product design, design systems, information architecture, user research
Builds with: Flutter/Dart, Python/FastAPI, Next.js, PostgreSQL, Supabase, Javascript, HTML/CSS
AI: Agent design (Google ADK), model evaluation, AI output quality (test + slop diagnosis), prompt design
Languages: English, Mandarin, Cantonese
