PROFILE

Designer-engineer for AI-native products. Critiques AI-generated UIs and humanizes user flows, bringing the discriminating eye that catches where AI output feels off plus engineering hands to ship the fix end-to-end. Uses AI throughout the workflow, not just in the product. UC Berkeley CS + Cognitive Science, University of Maryland HCIM. Most recent: 8 months as the founding product engineer at JustGrow, an AI parenting companion.

EDUCATION

University of Maryland, College Park

M.S in Human-Computer Interaction (GPA: 4.0/4.0)

College Park, MD

August 2021 – May 2023

University of California, Berkeley

B.A in Computer Science & B.A. in Cognitive Science

Berkeley, CA

August 2016 – December 2020

PROFESSIONAL EXPERIENCE

Founding Product Engineer ([JustGrow](#))

LightSail Technologies, Inc.

Remote

August 2025 – Current

- Bridge between design eye, engineering hands, and **AI-product taste** on a small team. Own execution across UX, Flutter, Python/FastAPI, and AI agents (Google ADK). **Bootstrapped to 200+ users and ~50 MAU** without paid acquisition.
- Designed and shipped an AI system that generates personalized, original stories on demand in English and Chinese; diagnosed three **AI “slop” failure modes** (quiz pattern, formula compliance, forced emotion) and reshaped agent prompts around concrete examples, **cutting latency 14s → 9.4s**.
- Catch AI-generated UI patterns that **look correct but fail in real use**, including custom share sheets duplicating native UI, sub-spec touch targets, screen-stack bugs that broke back navigation, and missing empty-state copy.
- Designed and built the **achievement system end-to-end**, adapting a pattern from gaming to make invisible parenting work visible; later led the redesign which **retired 12 leaderboard achievements** after the category produced the wrong dynamic between co-parents, replaced with personal, non-positional categories that recognize consistency over volume.
- **Wired design intent into the codebase** via a constraint log, intentional-exception callouts, and a design-system guardrail script, so future teammates and AI agents don’t “fix” deliberate decisions.

Founding Product Designer

Early-Stage Startup (Closed)

Remote

April 2023 – June 2024

- **Defined the product vision and design strategy** by identifying key product attributes, aligning with market trends, and uncovering 3 critical user pain points through exploratory research.
- **Designed and delivered the MVP from 0→1**, creating **over 30 mid-fidelity wireframes** in Figma across 8 essential features, while establishing the core elements of the product’s design system.

Product Designer

Library of Congress

College Park, MD

September 2022 – May 2023

- **Led 5 design sprints** using the 5-stage process to deliver a [high-fidelity redesign](#) of an existing web product, aligning problem spaces across platforms into a cohesive long-term vision.
- **Synthesized qualitative and quantitative findings** to refine the product’s **information architecture** and improve onboarding for a complex, data-rich system.

SELECTED PROJECTS

Orvia: Smart Shift Management System

Independent Product Designer & Developer

March – July 2025

- **Designed and launched MVP** of a shift management app for multiple store locations, saving ~3 hours per week and reducing manual entry errors.
- **Built auto-scheduling logic** with Supabase and Next.js to assign shifts based on availability, roles, and recurring patterns, supporting **flexible yet rule-driven** workforce planning.

SKILLS

Design & Research: 0→1 product design, information architecture, user research

Builds with: Flutter /Dart, Python / FastAPI, Next.js, PostgreSQL, Supabase, Javascript, HTML / CSS

AI: Agent design (Google ADK), model evaluation, AI output quality (test + UI slop diagnosis), prompt design

Languages: English, Mandarin, Cantonese
